Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

# Application No. Applicant(s) 10/599,151 YANAGIOKA, MASAKI Office Action Summary Examiner Art Unit /JOHN USELDING/ 1796 -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --Period for Reply A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS. WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). Status 1) Responsive to communication(s) filed on 09 July 2009. 2a) ☐ This action is FINAL. 2b) This action is non-final. 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213. Disposition of Claims 4) Claim(s) 1-7.10 and 11 is/are pending in the application. 4a) Of the above claim(s) is/are withdrawn from consideration. 5) Claim(s) \_\_\_\_\_ is/are allowed. 6) Claim(s) 1-7, 10 and 11 is/are rejected. 7) Claim(s) \_\_\_\_\_ is/are objected to. 8) Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement. Application Papers 9) The specification is objected to by the Examiner. 10) The drawing(s) filed on is/are; a) accepted or b) objected to by the Examiner. Applicant may not request that any objection to the drawing(s) be held in abevance. See 37 CFR 1.85(a). Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d). 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152. Priority under 35 U.S.C. § 119 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f). a) All b) Some \* c) None of: Certified copies of the priority documents have been received. 2. Certified copies of the priority documents have been received in Application No. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)). \* See the attached detailed Office action for a list of the certified copies not received.

Art Unit: 1796

## DETAILED ACTION

## Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 7/9/2009 has been entered.

## Claim Rejections - 35 USC § 102/103

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-7 and 10-11 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Sakakibara (6,197,870).

Regarding claims 1-3: Sakakibara teach a rubber composition for tire tread (column 1, lines 7-12) comprising 20-150 parts by weight of carbon black per 100 parts of a rubber component (claim 6). All the examples of Sakakibara are within the claimed

Application/Control Number: 10/599,151

Art Unit: 1796

range (Tables 4 and 5). The Applicant also claims the process by which the carbon black is made. This is a product by process limitation. Process limitations in product claims are not limited to the manipulations of the recited steps, only the structure implied by the steps. "In re Thorpe, 227 USPQ 964, 966 (Fed. Cir. 1985). Where the claimed and prior art products are identical or substantially identical in structure or composition, or are produced by identical or substantially identical processes, a prima facie case of either anticipation or obviousness has been established. In re Best, 562 F.2d 1252, 1255, 195 USPQ 430, 433 (CCPA 1977). "When the PTO shows a sound basis for believing that the products of the applicant and the prior art are the same, the applicant has the burden of showing that they are not." In re Spada, 911 F.2d 705, 709, 15 USPQ2d 1655, 1658 (Fed. Cir. 1990). Therefore, the prima facie case can be rebutted by evidence showing that the prior art products do not necessarily possess the characteristics of the claimed product. In re Best, 562 F.2d at 1255, 195 USPQ at 433. See also Titanium Metals Corp. v. Banner, 778 F.2d 775, 227 USPQ 773 (Fed. Cir. 1985). The examiner notes that Sakakibara teach that their process of producing carbon black using a production furnace having a combustion zone, reaction zone, and reaction stop zone coaxially connected together wherein the carbon black is made using a combustion reaction and includes a step of quenching the reaction (column 6, line 38 to column 7, line 18). Sakakibara teach examples where the toluene tinting permeability and the CTAB are within the claimed ranges (Table 8, Examples 4-7). Applicant claims that the hydrogen desorption ratio is greater than 0.260-6.25x10<sup>-4</sup> x CATB. Sakakibara does not specifically teach this property for their carbon black. This is not a test that is

Application/Control Number: 10/599,151

Art Unit: 1796

normally used in the art to test the properties of carbon black. The examiner takes the position that Examples 4-7 would inherently meet this limitation. All four (DBP. compressed DBP, CTAB, and TINT) of the physical property tests taught by Sakakibara meet the applicant's limitations. The applicant alleges that when the hydrogen desorption ratio does not meet this limitation that the wear resistance of the tire tread lowers and the heat build up becomes undesirable high (paragraph 0023). Sakakibara are also concerned with wear resistance (abrasion resistance) and heat build up (represented by tan δ) of tire tread (column 10, lines 7-25). The values given in Table 5 show that the carbon black of Sakakibara provides both a low heat buildup and good wear resistance. If applicant's allegations are correct, hydrogen desorption ratios of Examples 4-7 must meet applicant's limitations otherwise the heat buildup and wear resistance values would have been bad. The examiner also notes that the applicant has not provided sufficient evidence to prove their assertion. There are no examples where all the other factors stay the same and only the hydrogen desorption ratio changes from meeting this limitation to not meeting this limitation. The applicant has failed to show that the hydrogen desorption ratio of the carbon black affects the physical structure of the rubber composition.

Regarding claims 4 and 5: Sakakibara teaches examples where the DBP, 24M4DBP, and CTAB values are within the claimed ranges (Examples 4-7).

Regarding claim 6: Sakakibara teach examples where the tinting strength >0.363xCTAB+71.792 (Table 1, Examples 4 and 5).

Art Unit: 1796

Regarding claim 7: Sakakibara teaches examples where the tinting strength< 0.363xCTAB+71.792 and TINT>50 (Table 1, Examples 6 and 7).

Regarding claim 10: Sakakibara teaches examples 4-7, which inherently meet the claimed monochlorobenzene extraction limitation. The applicant alleges that when the extraction amount with monochlorobenzene exceeds 0.15% the wear resistance is undesirably deteriorated (paragraph 0024). Sakakibara is also concerned with wear resistance (abrasion resistance) of tire tread (column 10, lines 21-25). The values given in Table 5 shows that examples 4-7 have superior wear resistance. If applicant's allegations are correct the extraction amount with monochlorobenzene of examples 4-7 must not be more than 0.15% otherwise the wear resistance values would have been bad. The examiner also notes that the applicant has not provided sufficient evidence to prove their assertion. There are no examples where all the other factors stay the same and only the extraction amount with monochlorobenzene changes from at or below 0.15% to above 0.15%. The applicant has failed to show that the extraction amount with monochlorobenzene of the carbon black affects the physical structure of the rubber composition.

Regarding claim 11: Sakakibara teaches that their composition is used in tire treads of various automobiles (column 1, lines 7-12) and that the tires are made for low fuel consumption (column 1, lines 21-31). Given the description of Sakakibara the skilled artisan would immediately envisage pneumatic tires.

#### Response to Arguments

Application/Control Number: 10/599,151

Art Unit: 1796

Applicant's arguments with respect to claims 1-7 and 10-11 have been considered but are moot in view of the new ground(s) of rejection.

## Contact Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to /JOHN USELDING/ whose telephone number is (571)270-5463. The examiner can normally be reached on Monday-Thursday 6:00am-4:30pm EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mark Eashoo can be reached on 571-272-1197. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
